[Drought Response & Recovery for Water Utilities Case Study: Cities of Hays and Russell, Kansas](#)

NOTE: If you need captions, please click the CC button on the player to turn them on. This video describes how the water utilities in the cities of Hays and Russell, Kansas, responded to and recovered from severe drought. After dealing with various droughts in the past, the two cities have worked to make conservation a priority, put in long-term water-use rules and invested in xeriscaping programs. In times of emergency, they can request water releases from a nearby reservoir. If they coordina

[Drought Response & Recovery for Water Utilities Case Study: City of Clinton, Oklahoma](#)

NOTE: If you need captions, please click the CC button on the player to turn them on. This video describes how the water utility in the city of Clinton, Oklahoma responded to and recovered from severe drought. At one point, Clinton lost its primary water supply and its back-up supply was dwindling. They implemented water restrictions, raised water rates to fund the development of new groundwater wells and a reverse osmosis treatment plant and found a creative solution for disposing of the waste

[Scientific Integrity at EPA](#)

NOTE: If you need captions, please click the CC button on the player to turn them on. This is an introductory video on scientific integrity. EPA's ability to protect human health and the environment depends upon the integrity of the science on which it relies. From the earliest formation of a scientific question to the use of results in decision-making and public communications -- scientific integrity creates protections for science from inappropriate interference. These protections ensure that

EPA and Idaho National Laboratory create first-of-its-scale Water Security Test Bed (OLD)

Advancing the science and engineering of decontaminating water distribution systems and safely disposing of high-volumes of contaminated water are high priorities for the EPA. To help address these science gaps, EPA homeland security researchers have developed the first-of-its-scale Water Security Test Bed (WSTB). Water is an important component of everyday life. We rely on safe, clean water for our health and the health of the environment. Protecting this vital resource is critical to living

[Becoming Climate Ready](#)

NOTE: If you need captions, please click the CC button on the player to turn them on. This video highlights the importance of water and wastewater utility extreme weather event and climate change adaptation planning. Ms. Annie Chiodo of the Waynesboro Water System represents a small water utility in southern Tennessee. She learned through real-world experience that one must adapt to survive. A string of floods in 2003, 2004, and 2010 devastated her utility, but by taking small steps, such as

U.S. Environmental Protection Agency Headquarters named in honor of President Bill Clinton.

A Ceremony was held on July 17, 2013, to name the U.S. Environmental Protection Agency Headquarters building in Washington, D.C., in honor of President Bill Clinton. The U.S. Congress passed legislation in December 2012 to name the building at 1200 Pennsylvania Avenue as the William Jefferson Clinton Federal Building. At that time, U.S. Senator Barbara Boxer, who authored the legislation, stated that Bill Clinton demonstrated a strong commitment to protecting public health and the environment.

LEPCs: Guarding the Safety of Your Community

NOTE: If you need captions, please click the CC button on the player to turn them on. While, in general, chemicals are stored, handled and transported safely, chemical accidents can threaten our health and safety. Knowledge of existing local hazards and potential hazards, as well as careful planning by the local community are essential to controlling this threat. To meet this challenge, Congress created a vital tool: The Local Emergency Planning Committee, or LEPC.
